UN Open GIS Monthly VTC

17 June 2026

Ariel Anthieni, OSGeo Foundation

Hidenori Fujimura, Geospatial Information Authority of Japan

Josep Parareda, United Nations Geospatial Information Section

Agenda

1. Comments by co-chairs, introduction of new participants
2. DWG and pilot project reports – descending order
    1. DWG8: IGIF implementation – Ariel
    2. DWG7: Smart Maps– Hidenori
    3. DWG6: OpenDroneMap – Stephen
    4. DWG5: Geo-AI – Zhongxin
    5. DWG2: Capacity Building – Diego
    6. DWG1 & pilot projects: Hybrid GIS Infrastructure – Timur
3. Any Other Business

DWG-7: Smart Maps

Keep web maps open. Test new technologies. Practice software freedom.

June 2026: current focus

- DWG 7 studies practical technologies for improving **access** to geospatial information.
  - Efficient access to large (~ TB) geospatial datasets
  - Portable deployment using single-board PC (Raspberry Pi)
  - Integration of open and secured geospatial information
  - Evaluation of emerging geospatial technologies

We are not primarily an open data advocacy group, rather, studying how to reduce the cost of accessing geospatial information.

Progress since Last Meeting

Contribution to Mapterhorn and Source Cooperative:

- **1m DEM** and **50cm seamless aerial imagery** (Japan) in PMTiles

Why this matters:

- Provides high-quality source datasets in a cloud-native way.
- Supports future experimentation on portable development.

Access to data is often a greater challenge than data availability.

Next Steps

- CNG Japan 2026 (24 August 2026)
  - Participation under consideration
  - Potential participants: Yuiseki, Hidenori
- Further steps
  - Continue collaboration with Mapterhorn and Source Cooperative.
  - Explore Raspberry Pi-based deployment scenarios.
  - Investigate practical access methods for both open and secured geospatial datasets.
  - Continued collaboration with HOT and OSM Sierra Leone.
